

Annual Population Estimates by Age, Sex, Race, and Hispanic Origin for Florida and Its Counties, 2000–2010 (Revised and Updated)

Stefan Rayer, Population Program Director
Ying Wang, Research Demographer
Stanley K. Smith, Professor Emeritus

Each year, BEBR releases a new set of population estimates by age, sex, race, and Hispanic origin for all counties and for Florida, which are controlled to the BEBR estimates of total population. These are post-censal estimates, i.e. they are based on results from the previous census and are updated using symptomatic indicators of population change available at the time. For most counties, the population estimates published by BEBR during the 2000s provided reasonably accurate indications of population change. Nevertheless, to correct for errors in the data used to construct the original estimates, to draw on data that were not available when the original estimates were produced, and to incorporate the results of the 2010 census, in May 2011 BEBR published Special Population Report Number 7, “Revised Annual Population Estimates for Florida and Its Counties, 2000–2010, with Components of Growth.” This series of revised estimates of total population provided annual estimates of total population consistent with both the 2000 and 2010 decennial census counts. The BEBR estimates by age, sex, race, and Hispanic origin made during the decade, however, were not updated at the time. The population estimates by age, sex, race, and Hispanic origin published in this report were created to provide a consistent series of intercensal population estimates by demographic characteristics for 2000–2010.

DATA

Data from the 2000 and 2010 decennial censuses formed the basis for this set of population estimates by age, sex, race, and Hispanic origin. To be consistent with the BEBR population projections, the April 1, 2000 and April 1, 2010 populations are based on the bridged-race classification developed by the National Center for Health Statistics (NCHS) in collaboration with the U.S. Census Bureau. Using a variety of data sources and techniques, the NCHS assigned people who classified themselves as belonging to more than one race (or who marked “some other race” on the census questionnaire) to a single primary race. These modifications produced data that were consistent over time, prevented double-counting of people belonging to more than one race, and provided a racial classification for Hispanics who did not identify their race.

These estimates by age, sex, race, and Hispanic origin use the revised BEBR estimates of total population referenced above as controls. The latter incorporated corrected counts for April 1, 2000 that were a result of the Census 2000 Count Question Resolution (CQR) program, but used original Census 2010 counts for April 1, 2010. We updated that series to incorporate corrected counts for April 1, 2010 that were a result

of the Census 2010 CQR program. The Census 2010 CQR program is still ongoing; we included corrected counts last updated on February 11, 2014. This resulted in changes to the population estimates of total population for 2001–2009, as well as the April 1, 2010 census counts, for Lake, Marion, and Miami-Dade counties. In addition, we updated the population estimates of total population for 2001–2009, as well as the April 1, 2010 census count, for Gadsden County. In Gadsden County, the 2010 census failed to enumerate an institutional facility. Though not part of the CQR program, the size of the affected population is large enough to warrant an adjustment. In addition to revised estimates for those four counties, these adjustments also resulted in changes to the population estimates of total population for 2001–2009, as well as the April 1, 2010 census count, for the state.

With the revised estimates of total population for 2001–2009 in place, as well as corrected census counts of total population for 2000 and 2010, the next step was to obtain corrected April 1, 2000 and April 1, 2010 population distributions by age, sex, race, and Hispanic origin. Unfortunately, there exist no corrected census counts or population estimates by age, sex, race, and Hispanic origin for April 1, 2000 that follow the NCHS bridged-race classification and that incorporate CQR changes. Consequently, we made adjustments to the April 1, 2000 NCHS population estimates by age, sex, race, and Hispanic origin to reflect the CQR changes of total population; adjustments were made for Franklin, Gulf, Lake, Miami-Dade, Palm Beach, Pasco, Pinellas, Sarasota, and Seminole counties, which also resulted in adjusted estimates for the state. The Vintage 2013 NCHS bridged-race postcensal population estimates include an April 1, 2010 estimates base population that includes CQR changes for Lake, Marion, and Miami-Dade counties. We used these estimates and made an additional adjustment for Gadsden County to correct for the institutional facility that the 2010 census failed to enumerate in the county.

Large institutions (e.g., universities, prisons) account for a significant proportion of the total population in many counties in Florida. In such counties, it is important to account for the impact of these institutions when making population estimates. Consequently, we used institutional records and data from the decennial census to estimate the non-institutional population

by age, sex, race, and Hispanic origin for 2000–2010 in the following counties: Alachua, Baker, Bradford, Calhoun, Columbia, DeSoto, Dixie, Franklin, Gadsden, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Holmes, Indian River, Jackson, Jefferson, Lafayette, Leon, Liberty, Madison, Okeechobee, Santa Rosa, Sumter, Suwannee, Taylor, Union, Volusia, Wakulla, Walton, and Washington counties. In these counties, we made separate estimates for the institutional and non-institutional populations. The final estimates for each county were constructed by adding together the institutional and non-institutional populations. The remainder of this report describes the methodology used for making estimates of the non-institutional population.

METHODOLOGY

Using modified census data and institutional population data for 2000 and 2010, we subtracted the institutional population from the total population for each age, sex, racial, and ethnic group to derive estimates of the non-institutional population in each demographic subgroup. We then made estimates for non-Hispanic whites, non-Hispanic nonwhites, and Hispanics for 2005 by interpolating five-year age cohorts between 2000 and 2010 separately for males and for females. For example, we interpolated males aged 0–4 in 2000 and males aged 10–14 in 2010 to obtain the male population aged 5–9 in 2005. This technique provided estimates for 2005 for all age groups except for ages 0–4, 80–84, and 85 and older. The population aged 0–4 in 2005 was derived through the application of child-woman ratios (i.e., population aged 0–4 divided by females aged 15–44). We calculated child-woman ratios in 2000 and 2010, interpolated them for 2005, and applied them to the estimated female population in 2005 to provide estimates of children aged 0–4. In several counties, adjustments were made to the child-woman ratios so that the estimated population aged 0–4 in 2005 more closely approximated the number of births that occurred over the period 2000–2004, accounting for migration. Populations for ages 80–84 and 85 and older were estimated through age group interpolations. For all age groups we added males and females to provide estimates for both sexes. As a final step, we added the estimates of the institutional population – providing estimates by age and sex for non-Hispanic whites, non-Hispanic nonwhites and

Hispanics – and controlled the results to the revised estimates of total population. Estimates at the state level were calculated by adding up the county estimates.

We developed estimates for several additional racial/ethnic groups for 2005. Using the 2000 and 2010 NCHS data, we first calculated the white/nonwhite proportion of the Hispanic population for each county, interpolated them to 2005, and applied those proportions to the Hispanic estimates to provide a white/nonwhite breakdown of the Hispanic population. Adding the Hispanic white population to the non-Hispanic white population provided estimates of the total white population by age and sex for each county. Using the 2000 and 2010 NCHS data, we then calculated blacks as a proportion of nonwhites for both the Hispanic and non-Hispanic populations. We interpolated these proportions to 2005, and applied them to estimates of the nonwhite population (for both Hispanics and non-Hispanics) to develop estimates of the non-Hispanic black population and the total black population by age and sex for each county.

Estimates for the remaining years were developed by interpolating the 5-year age group estimates between 2000 and 2005 to provide estimates for 2001–2004, and between 2005 and 2010 to provide estimates for 2006–2009, for all racial/ethnic groups. In a number of counties, we made adjustments to the interpolation ratios to allow for a smoother progression of each racial/ethnic group’s population total from year to year. The estimates by age, sex, race, and Hispanic origin for each year were then controlled to the revised estimates of total population. Estimates at the state level were calculated by adding up the county estimates.

This report provides data for abbreviated age groups (0–4, 5–17, 18–24, 25–54, 55–64, 65–79, and 80+ for

all counties and the state, with additional breakdowns for ages 14–17, 16+, 21+, 26+, 62+, and 67+ for the state) for non-Hispanic whites, non-Hispanic blacks, and Hispanics. Data in five-year age groups up to age 85+ (including a breakdown for ages 15–17 and 18–19) are also available, not only for the three racial/ethnic groups shown here but also for the white, nonwhite, and black populations without reference to Hispanic origin. These data may be downloaded from the Bureau of Economic and Business Research’s website (<http://www.bebr.ufl.edu>).

NOTE

This is an updated version of Special Population Report No. 10, which was originally published in February 2015. This updated version includes adjustments to the originally published numbers for Broward, Duval, Hillsborough, Orange, Osceola, Palm Beach, Polk, Saint Lucie, Seminole, and Volusia counties. These adjustments were made to provide more realistic age and sex distributions for some of the small racial/ethnic categories for which we don’t publish estimates, but which can be calculated as residuals. Consequently, for these ten counties and for the state as a whole, the estimates by age, sex, race, and Hispanic origin are somewhat different from the originally published numbers. These adjustments also resulted in very small changes in the originally published numbers for the state’s remaining 57 counties.
